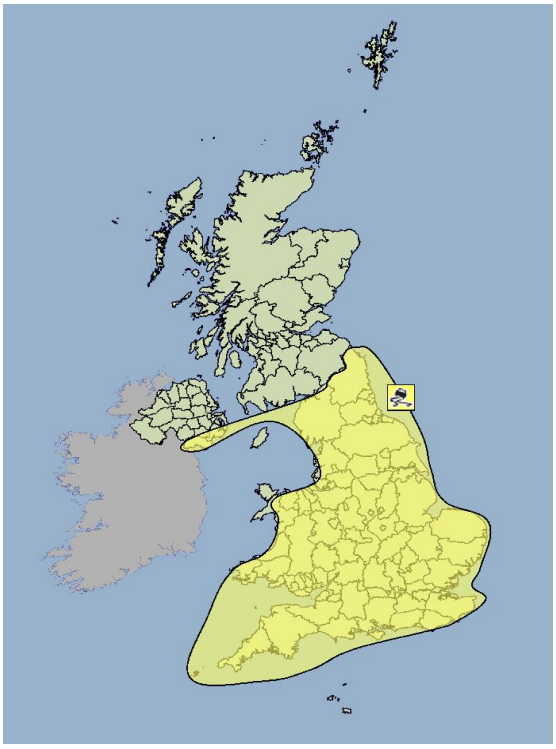
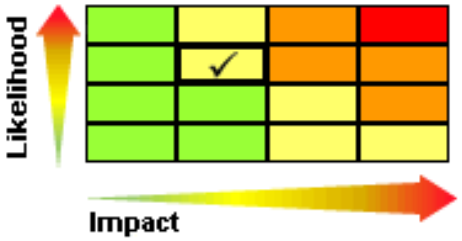
National Severe Weather Warning Service





Chief Forecasters Assessment
After a very cold day on Sunday, temperatures are likely to fall well below freezing across many areas into the start of Monday. This will lead to any partly melted snow refreezing. Snow in the south and southwest of England will be slower to clear and may take until morning before dying out completely, whilst some wintry showers may continue to affect eastern coasts, falling onto subzero surfaces.

This warning has been updated, chiefly to remove southeast Scotland (covered by a separate warning).

The Met Office have issued a **Yellow Warning** of **Ice**

Valid from **00:05 on Mon, 19th Mar 2018** until **10:00 on Mon, 19th Mar 2018**

Ice is likely to form on untreated roads, pavements and cycle paths. This increases the risk of accidents, as well as injuries due to falls.

Further snow is likely across parts of the southwest of England, easing from the north by morning, with a few light snow showers for other southern counties for a time.
